

Increased efficiency at the office

With Ellipse, the busy office becomes an even more efficient workplace. Ellipse is designed for people who want to take the next step after hands-free use of their telephones - and step away from their desks while talking on the phone.

The cordless Ellipse takes users further because not only can you leave your desk completely to retrieve information without hanging up, with Ellipse you can even answer calls when you are far away from your desk.

Base unit

Headset Stand
The headset can be stored on the headset stand when not in use.

Headset/Handset Button
The headset/handset button allows Ellipse users to change easily between the headset and handset.

Microphone
Volume Control
The switch adjusts the outgoing sound level so the caller can always hear the Ellipse user clearly and distinctly.

Telephone Termination Switch
The switch adjusts to all of the most commonly used telephones and telephone systems.

Remote unit

On-line Indicator
The light flashes when the headset/handset button is in the headset position.

Volume Control
The volume control adjusts the incoming sound so the user can always hear the caller clearly and distinctly.

Mute Button
The mute function allows the user to speak freely without the caller hearing what is said. A signal indicates when the mute function is active.

Hook Switch
The hook switch button allows the user to answer a call when away from his/her desk if a hook switch device is connected to Ellipse. The button can also be programmed to work with electronic hook switches or for other uses such as Push-to-Talk (PTT), used by the law enforcement sector - and even to open doors.

Battery Charging Indicator
The indicator lights up when the battery is in the recharging slot.

On-line Indicator
The indicator lights up when the headset/handset button is in the headset position and flashes when the Ellipse user is talking.

Better customer service at call centres

The Ellipse family of cordless headset solutions offers a new level of freedom to call centre managers and agents at busy call centres.

At call centres, efficiency is money. With Ellipse, call centre managers can walk away from their desks to supervise agents and still be able to answer incoming calls. Agents can also leave their workstations to retrieve information, complete a call, and answer a new call while returning.

Why choose Ellipse?

An advanced cordless solution you can rely on

Ellipse is the world's most advanced cordless headset solution, and its elegant, user-friendly design reflects this fact. The streamlined appearance of the base unit, which even holds an extra battery, and the compact, lightweight remote unit, which only weighs 100 grams including the battery, both harmonise with the requirements of today's modern workplace.

The Ellipse family – with its wide variety of variants, accessories and free choice of headset – is designed to meet your needs, whether your work-place is a call centre, an office, a warehouse, or even a police station.

With the Ellipse family, GN Netcom offers headset users an advanced cordless solution you can rely on. In short: As far as you can go with a headset!

Headsets

The Ellipse family offers many headset options. You can choose a GN Netcom headset from the Profile, ADDvantage Plus, Optima and CombiSet headset series.

Accessories

Hook Switch Device
The hook switch device allows you to answer calls or hang up without returning to your desk. The hook switch device lifts or lowers your handset when you press the hook switch on the remote unit.

Wearing Styles
For wearing the lightweight remote unit, there are two types of belt clips – an elegant standard version and an extra-strong belt version. In addition, there is an "around-the-neck" style (lanyard), designed especially for women who may not have a belt or pocket on their dress for the clip style.

Technical information

Compatibility
Ellipse can be connected to all of the most commonly used telephones and telephone systems.

DECT Technology
Standard Ellipse uses 1.8 GHz digital DECT technology, but other members of the family operate on other frequencies. Ellipse automatically selects a free channel when turned on which gives clear reception even when there are many users.

Call Security
Ellipse's digital encrypted signalling scheme prevents eavesdropping so all your calls are private.

Transmission Range
With Ellipse, you can move up to 150 meters from the base unit. If you move out of the transmission range, a signal in your headset lets you know. Meanwhile, your call will be put on hold.

All Day Talktime
Ellipse gives you 12 hours of continuous talktime with one single battery. With the optional second battery, you can increase talktime to 24 hours per day.

Battery Charging
The battery is fully recharged in 3 hours. You can recharge a second battery in the extra recharging slot. If battery power gets too low, a signal in your headset lets you know.

Ellipse

Introducing the family of cordless headset solutions

Why choose a cordless solution?

Freedom at work

Cordless Ellipse allows you to move up to 150 meters from your desk while talking on the phone. This way you can:

- Keep your caller on-line while finding the answers to their inquiries by consulting a colleague down the hall.
- Answer calls even when you're not at your desk.
